

About this Training Program

Aerial work platforms are extremely useful and beneficial in performing work from heights. They are designed to quickly and easily move workers within an enclosed metal platform to heights difficult to attain by conventional means. However, as with any other piece of equipment, improper or careless use of an aerial work platform can lead to a hazardous situation.

This refresher level course is intended for those who have already completed a basic level of hands-on aerial work platform training, and does not replace in-depth aerial work platform training courses that meet regulatory requirements.

The average student will require a hour to complete this training, and is awarded with a downloadable and printable certificate of training.

Course Overview

- Introduction
- Types of Aerial Work Platforms
- Aerial Work Platform Components
- Potential Hazards
- Preparing the Work Area
- Driving the Aerial Work Platform
- Aerial Work Platform Operation
- Stability and Balance
- Refueling and Maintenance
- Mastery Quiz (90% to pass)

Verification Techniques Employed

- ✓ **Identity:** Unique usernames and passwords.
- ✓ **Security:** Bank-level encryption.
- ✓ **Question Bank:** Every quiz attempt includes a unique combination of questions pulled from a large pool.
- ✓ **Certificate Verification:** Certificates contain a verification code that can be checked on CompetencyMill.ca.
